DOCKING • ITS UPDATER
FIRMWARE UPDATE

REF. ITSDOCKING

STEP 2 • PROCEDURE OF THE UPDATE

IMPORTANT

DO NOT UNPLUG THE DOCKING DURING THE UPDATE. IN CASE OF DISCONNECTION FROM THE SERVER, THE DOCKING SAVES THE DATA AND RESTORES IT DURING THE AUTOMATIC RECONNECTION TO THE SERVER.

1 Switch the Docking to UPDATE mode

Press the black button next to the SIM card. While holding it, turn on the docking.

Then release the black button when the Docking is on *(blue button lit)*.

The button lights up but the screen will remain black.

2 Connect Docking to PC via USB/RS232 cable

2 available lengths :

2 METERS : **REF. CO2M**   3 METERS : **REF. CO3M**

3 Select the hardware to be updated

4 Find the com port of the Docking among the available com ports via the drop-down menu (all available com ports are displayed)

Select the Docking update **«.BIN»** file

5 Press the **UPDATE** button to start the update

MESSAGE : THE UPDATE IS SUCCESSUFL

Success

Update done.

OK

NOTE : if an error message is displayed, it means that either the com port was not the one the Docking, or the Docking was not in update mode.

ERROR MESSAGE : THE DOCKING IS NOT IN UPDATE MODE

Update Error

Docking unreachable.

OK
